AB The invention relates to an ink-jet recording medium having a support and, provided thereon, at least one ink receiving layer containing polymeric organic particles, characterized in that said polymeric organic particles have a oxide glass transition temperature of 40 °C or higher, and are amphoteric polymeric organic particles having both functional groups of cationic groups and anionic groups. The ink-jet recording medium is excellent in ink absorbing property, coloring concentration, gloss, and the resistance to water, light and yellowing, in particular, excellent in ink absorbing property, coloring concentration, gloss, and the resistance to light and yellowing.

NOVELTY - Ink-jet recording medium has at least 1 ink receiving layer including polymeric organic particles on a support, which are amphoteric polymeric organic particles having a glass transition temperature (Tg) of at least 40 deg. C and cationic and anionic groups.
USE - Used as an ink-jet recording medium (claimed) used in printers and plotters using an ink-jet recording system.
ADVANTAGE - The medium has excellent light absorbing properties, color concentration, gloss and resistance to water, light and yellowing.
